

AI-Powered Personal Finance Advisor using Agentic AI

Problem Statement

- Users lack proper financial planning and awareness
- Existing apps only track expenses, no intelligent insights
- No personalized financial guidance based on user behavior
- Overspending and poor saving habits are common
- Professional financial advisors are costly and inaccessible

Overview & Theme

- An intelligent system that manages and analyzes personal finances
- Uses Agentic AI to provide real-time insights and predictions
- Acts as a virtual financial assistant through chatbot interface

Theme: “Smart Financial Decision-Making using AI”

Objective

Objectives

Proposed Solution

Agentic AI-based Finance Advisor:

A multi-agent system that continuously monitors user data, analyzes spending, predicts future risks, and provides personalized financial guidance automatically.

Agents in the System

- **Data Agent:** Collects user transaction data (manual input/API), cleans it, and stores it in a structured format for further processing.
- **Analysis Agent:** Examines past data to identify spending patterns, trends, and unusual activities in user behavior.
- **Prediction Agent:** Uses ML models to forecast future expenses and detect possible overspending before it happens.
- **Recommendation Agent:** Generates personalized suggestions like budget plans, savings strategies, and expense control tips.
- **Chatbot Agent:** Acts as the interface between user and system, allowing interaction in simple natural language.

Workflow (How Agents Work Together)

Step 1: User Input

User enters data
or asks a query
through the
chatbot inter

Step 2: Orchestrator Routing

The orchestrator
understands the
request and sends
it to relevant
agents.

Step 3: Parallel Processing

Data, analysis, and
prediction agents
process
information
simultaneously

Step 4: Insight Generation

A
recommendation
agent combines
results to create
meaningful advice.

Step 5: Final Response

Chatbot delivers
clear insights,
alerts, and
suggestions to the
user.

Future Scope

- **Bank & UPI integration:** Automatic data collection from bank accounts for real-time tracking.
- **Investment guidance:** AI-based suggestions for stocks, mutual funds, and savings plans.
- **Tax optimization:** Helps users plan and reduce taxes with smart recommendations.
- **Voice assistant:** Interaction through voice commands for better accessibility.
- **Family finance mode:** Manage multiple users finances in a single platform.
- **Credit score tracking:** Monitor and improve credit health using AI insights.

THANK
YOU
